

Shaikh Unais

+91 xxx-xxx-xxx | unais.shaikh.dev@gmail.com | linkedin.com/in/unais-shaikh | github.com/unais-08

TECHNICAL SKILLS

Languages: C++, JavaScript, TypeScript
Frontend: React, HTML, CSS, Tailwind CSS
Backend: Node.js, Express.js, REST APIs
Databases: PostgreSQL
AI / GenAI: RAG, Embeddings, LLM Integration, Vector Search
Tools & Platforms: Git, GitHub, Supabase

EDUCATION

Dr Babasaheb Ambedkar Technological University <i>Bachelor of Technology in Computer Engineering CGPA: 7.5</i>	Lonere Aug 2021 – July 2025
HNMC Jr College of Arts and Science <i>HSC Science Percentage: 83%</i>	Jalgaon Jun 2020 – Mar 2021

PROJECTS

DocsQuery - RAG Based Semantic Document Search | React.js, TypeScript, Express.js, Supabase, PgVector

- Built a full-stack document Q&A application implementing an end-to-end **Retrieval-Augmented Generation (RAG)** pipeline for document-based question answering.
- Implemented a document processing pipeline for **text extraction, cleaning, chunking, embedding generation**, and vector storage to enable semantic retrieval.
- Integrated **PgVector** for vector similarity search to retrieve relevant document chunks and provide contextual information to an LLM for source-grounded responses.
- Implemented **JWT authentication**, bcrypt password hashing, and protected REST API routes to enforce user-specific document access. [Github](#) [Live Demo](#)

Event Ticketing - QR Check-in Platform | React.js, TypeScript, Express.js, PostgreSQL, JWT

- Built a full-stack event management and ticketing platform with **role-based access control** for Admin, Organizer, Checker, and Attendee roles.
- Implemented **JWT-based authentication and authorization** with protected REST API routes and role-specific access controls.
- Developed the ticketing workflow covering **event creation, ticket purchasing, unique QR code generation, and attendee-ticket associations**.
- Designed and integrated **PostgreSQL** persistence for users, events and tickets records. [Github](#) [Live Demo](#)

AsyncQueue - Background Job Processing System | Node.js, TypeScript, PostgreSQL, Custom Job Queue

- Built a **background job processing system** using a producer-queue-worker architecture to execute long-running tasks asynchronously.
- Implemented **job lifecycle tracking, retry handling, and failure management** to manage jobs across producer and worker executions.
- Implemented a **Dead Letter Queue (DLQ)** for jobs that exhaust retry attempts, allowing failed jobs to be inspected and manually retried. [Github](#)

EXPERIENCE

Trainee - Python Programming <i>Reliable IT Institute</i>	Jul 2024 – Aug 2024 <i>Remote</i>
---	--------------------------------------

- Completed structured training in Python fundamentals, scripting, and debugging across hands-on coding sessions.
- Applied Python for data manipulation and automation tasks using core libraries and scripting practices.

LEADERSHIP AND ACTIVITIES

- Published a **research paper** in IJCRT on the **BookTrade Application**, detailing its system architecture, peer-to-peer book exchange model, and implementation. [Reasearch Paper Link](#)
- Solved **150+** problems across **LeetCode** and other coding platforms, focusing on **linear data structures and algorithms**. [LeetCode Profile Link](#)
