TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, C++
Frontend: React, Next.js, HTML, CSS, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, JWT
Databases: PostgreSQL
Tools & Platforms: Git, GitHub, Docker, AWS S3

PROJECTS

Event Ticketing & QR Check-in Platform | Next.js, TypeScript, Express.js, Prisma, PostgreSQL, JWT

- Built a full-stack event management platform with **role-based access control (RBAC)** across four roles – Admin, Organizer, Checker, and Attendee – secured via **JWT authentication** and protected REST API routes.
- Implemented an end-to-end ticketing workflow: event creation, ticket purchasing, and **unique QR code generation** per ticket linked to attendee and event records.
- Developed a real-time **QR code check-in system** with server-side validation for ticket existence, event association, ownership, and duplicate entry prevention.
- Designed normalized relational schema using **Prisma ORM** with type-safe database access across the full stack in TypeScript. ([Github](#)) ([Visit](#))

Sommaire – AI PDF Summarizer | Next.js, TypeScript, LangChain, Gemini Flash, PostgreSQL, Clerk

- Built a full-stack SaaS application where users upload PDF documents and receive **AI-generated structured summaries** using **Gemini Flash** via the LangChain LLM integration layer.
- Implemented **LangChain** document loading and text chunking pipeline to handle large PDFs, enabling reliable context extraction before LLM processing.
- Integrated **UploadThing** (S3-backed) for scalable file uploads and stored per-user summary history and file metadata in **PostgreSQL** with **Clerk**-based authentication. ([Github](#)) ([Visit](#))

API Rate Limiter with Analytics Dashboard | Next.js, Express, PostgreSQL, Redis, Docker

- Designed a **distributed microservices architecture** with four decoupled services – API Gateway, Rate Limiter, Analytics, and Admin Dashboard – each with a single, well-defined responsibility.
- Implemented the **Token Bucket algorithm** in Redis for distributed, low-latency rate limiting with per-API-key configuration and real-time enforcement at the gateway layer.
- Built an **API Gateway** handling API key validation, request proxying, and rate limit enforcement as a unified ingress point across all services. ([Github](#))

EXPERIENCE

Trainee – Python Programming

Jul 2024 – Aug 2024

Reliable IT Institute

Remote

- Completed structured training in Python fundamentals, scripting, and debugging across hands-on coding sessions.
- Applied Python for data manipulation and automation tasks using core libraries and scripting practices.

EDUCATION

DBATU University

Lonere

Bachelor of Technology in Computer Engineering | CGPA: 7.5

Aug 2021 – May 2025

HNMC Jr College of Arts and Science

HSC Science | Percentage: 83%

Jun 2020 – Mar 2021

LEADERSHIP & ACTIVITIES

- Published a [research paper](#) in IJCRT on the BookTrade Application, detailing its architecture, peer-to-peer book exchange model, and real-world impact.
- Led a team of 4** in building the BookTrade Application, owning end-to-end delivery across frontend and backend development.
